# MODERN GLADIOLI, IRIS AND ROSES

كارزون ووروز والمتراز والمتراز

W. E. SHERBROOKE KIRKLAND, WASH.

A Personal Chat

Dear Friends and Patrons—

In sending you this modest little catalogue I wish to express my gratitude to those of you responsible for the success of this and former efforts, either by your continued patronage or favorable recommendations to friends and neighbors.

Lust Spring's Price list announced my intention of resuming, at Kirkland, Wash., the floral nursery business formerly carried on at Cornelius, Oregon.

Whatever anxiety I felt for the success of my "come back" after an absence of four years from the game, was completely dispelled within three weeks after said list had been mailed.

My reputation for reliable goods, square dealing and conscientions, liberal treatment had survived and almost every mail brought something of cheer. "Glad to be able to get satisfactory plants again." "We wondered what had become of you." and "Sorry you have no roses this season but will wait until next season to get them from you although I am 73."

These and many similar expressions convince me that this is a pretty good old world after all for success in business is due to the operation of some vital principal, or sentiment, a feeling of confidence, fellowship and good will between buyer and seller—something more than mere value for value received.

Several seasons will be required to work up such a stock of roses as formerly carried but am prepared to take care of a considerable volume of business in my three specialties, Gladioli, Iris and Roses.

To merit your continued patronage and favors will be my constant endearor. I thank you.

W. E. SHERBROOKE.

ty of the flowers.

Cover lightly at first and fill trench as growth progresses.

They should not lack moisture and will respond to frequent cultivation.

Late in October or when foliage shows signs of ripening, dig and cut tops off close to the bulb. Dry in the sun or wind and do not store away until dry or they will mould and spoil.

The old exhausted bulb with roots and bulblets may be removed when most convenient, planting the bulblets in drills like peas if desired to increase stock. Store in frost proof cellar where neither too dry or too damp.

#### SIZES

Most growers consider everything an inch or over in diameter, a bulb, or corm that will present a good satisfactory blooming spike 70 to 90 days after planting.

I am quoting two sizes: First size will be about 1 1-2 inches, Second size about one inch or better.

Some varieties do not make large bulbs and first size in some varieties are no larger than second or thirds in more vigorous growers. All will bloom first season with fair treatment.

All stock is guaranteed to be true to name and I will replace such as are not true to lable or refund the price paid for same but will not be responsible for results obtained beyond this.

Mixtures and errors very seldom occur but if they do I hope you will be charitable enough to consider them as such and give me the opportunity of adjusting.

PLANTING STOCK AND BULBLETS:

(Prices on application.)

#### LIST OF VARIETIES, GLADIOLUS

Sizes	1st	2nd
ANNA EBERIUS, A rich and attractive velvety purple	25c	20c
	5 c	4c

### SHERBROOKE'S GLORIOUS MIXTURE 60cents per dozen—\$3.50 per 100.

The special collection of unlabled varieties sent out last season created quite a sensation. The 1922-23 "GLORIOUS" mixture will be far superior, containing many of Kundred's and Diener's hybrids also many choice named varieties that have become mixed in digging and handling. Have bought

many mixtures from other growers and am confident that my mixture cannot be excelled in quality. It is calculated to make a "Glad" fan of every purchaser. Try a lot of these. You will be delighted with them. A dozen for 60 cents, one hundred for \$3.50.

ALL PRICES INCLUDE FREE DELIVERY, when order amounts to \$1,00 or over. DOZEN bulbs at the price of ten.

#### TULIPS

Heretofore I have grown quantities of Tulips but for lack of space 1 must discontinue growing Tulips.

#### To Clear, While They Last.

Mixed varieties only, at 20 cents per dozen, medium size bulbs. You can afford to plant lots of these for cutting next spring, all are peautiful. No more for sale after these are disposed of.

#### IRIS GERMANICA

#### Tall Bearded Iris

The Iris is fast gaining in ropularity. As a border plant it is unsurpassed, being wonderfully attractive and permanent.

They require very little care after planting and will increase in size and

multiply year after year without lifting.

Plant in well prepared soil, properly enriched and limed (The Japanese varieties do not appreciate lime.) any time after July first until April first. the earlier the better for first season blooming. Set the roots as deep as necessary but do not cover the rhizume more than an inch or so, they appreciate being well baked in the sun after blooming period.

They require plenty of moisture while blooming but will rot in wet

places. Soil should therefore be well drained.

After four years in one location they should be lifted, divided and reset in new soil.

#### LIST OF VARIETIES

ARCHEVEQUE, Deep velvety purple, falls rich velvety violet. Grand	60c
AUREA, A lovely clear yellow throughout	30c
CAPRICE, Rosy red, falls deeper shade, quite fragrant	40c

YVONNE VACHEROT. H. T.: Porcelain white flushed rose	1.20	1.00
pink. Large perfect shape. Fine for exhibition and cutting	1 00	75c
STOCK. Own-root stock is furnished in varieties that		
their own roots. Some varieties make a very poor showing un		
	ness bu	ladea
on more vigorous root stocks.		

SIZES. All plants do not grow uniformly, some are vigorous, others short and stalky, so that price does not govern size always. For instance, a plant of Caroline Testout, at 60 cents, may be three times the size of

some variety listed at \$1.50.

FIRST SIZE. Plants will be strong two year old field-grown, pruned

back for convenient shipping.

SECOND SIZE. Also strong field-grown thrifty plants, larger and much superior to two year, pot-grown, plants of highest grade. No small, microscopic, thumb-pot size plants sent out. Second size plants have splendid root system and are better than larger plants carelessly dug with poor roots. I do most of the digging myself and aim to preserve ALL the roots, that is why I reccommend the second size, they are excellent value, sure to please.

TERMS: Cash with order. No. C. O. D. Orders booked unless 25% cash

is recieved with the order.

PLANTING. Plants should be set in well prepared soil, any time from late November to April 30, the earlier the better. Budded stock should be

set so the union of the stalk is covered about two inches.

MILDEW AND APHIDES. Spray several days in succession with a solution of soluable sulphur diluted with quantity of water designated on label of can, adding lump of LIFEBUOY soap or nicotine soap about the size of a walnut to two gallons of water. Unless very plentiful, squash the aphis between finger and thumb or with strong spray from garden hose early in the day

CULTIVATION. Roses appreciate attention and will not flourish if neglected. They require plenty of moisture but resent wet feet. Frequent cultivation is better than much sprinkling, "More hoes and less hose" is the idea. PRUNNING. March is the best time to prune Long canes that thrash about in the winds should be shortened in the fall or securely tied. Remove all but newest canes, shorten these to an eye pointing outwards. The idea is to keep the centre of bush open for free circulation of air, thus diminishing mildew troubles. Removing side buds will increase size and quality of bloom.
